

**MAKING YOUR DREAMS A REALITY**

## **FITTING INSTRUCTIONS**

### **TYLY-0380**

### **Shark Fin, Ninja ZX-4R(R)**

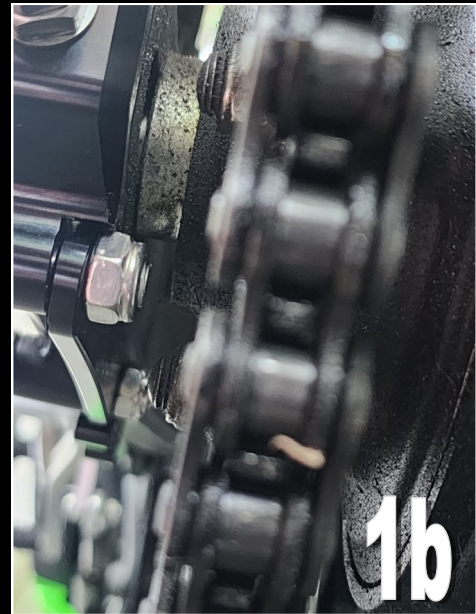

Fitting the TYGA TYLY-0380 Shark Fin, Ninja ZX-4R(R) is not a big job, with only regular tools required. However, fitment of the shark fin requires that the TYLY-0379 Paddock Stand Brackets are also fitted as we will use the M8 threaded hole in the swingarm end cap to secure the plate that the shark fin mounts to. But this time, instead of using the short M8 button head bolts, we will use the long button head bolts as supplied with the shark fin kit as we need to mount a bracket on the inner side of the swingarm.

So the first job is to take a look through the fitting instructions for TYLY-0379.

And then.....

**1)** Offer up the bracket and locate it on the inside of the swingarm. The long M8 bolts that now secure the paddock stand bracket act like an M8 stud on the inside.

Hang the shark fin bracket on these 'studs' and secure with the M8 nuts. Tighten securely.

**2)** Next, offer up the shark fin to the mount and secure with the two M6 cap head bolts and washers.

**3)** Job Done!
