

MAKING YOUR DREAMS A REALITY

FITTING INSTRUCTIONS

TYLY-0383

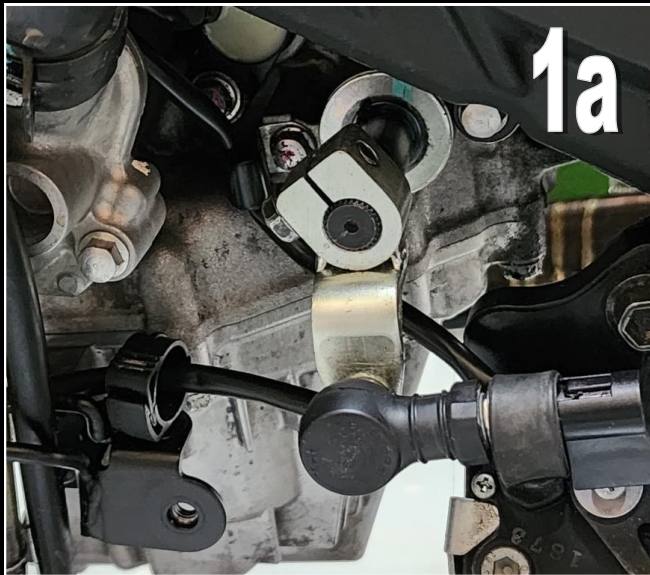

Gear change shaft support, Ninja ZX-4R(R)

Fitting the TYGA TYLY-0383 Gear change shaft support, Ninja ZX-4R(R) is not a big job, with only regular tools required. I removed the left side cowling, but this can be done with the cowling fitted. I just like to have a lot of space. Plus, I tend to drop tools and didn't want to scratch the cowling ☹️

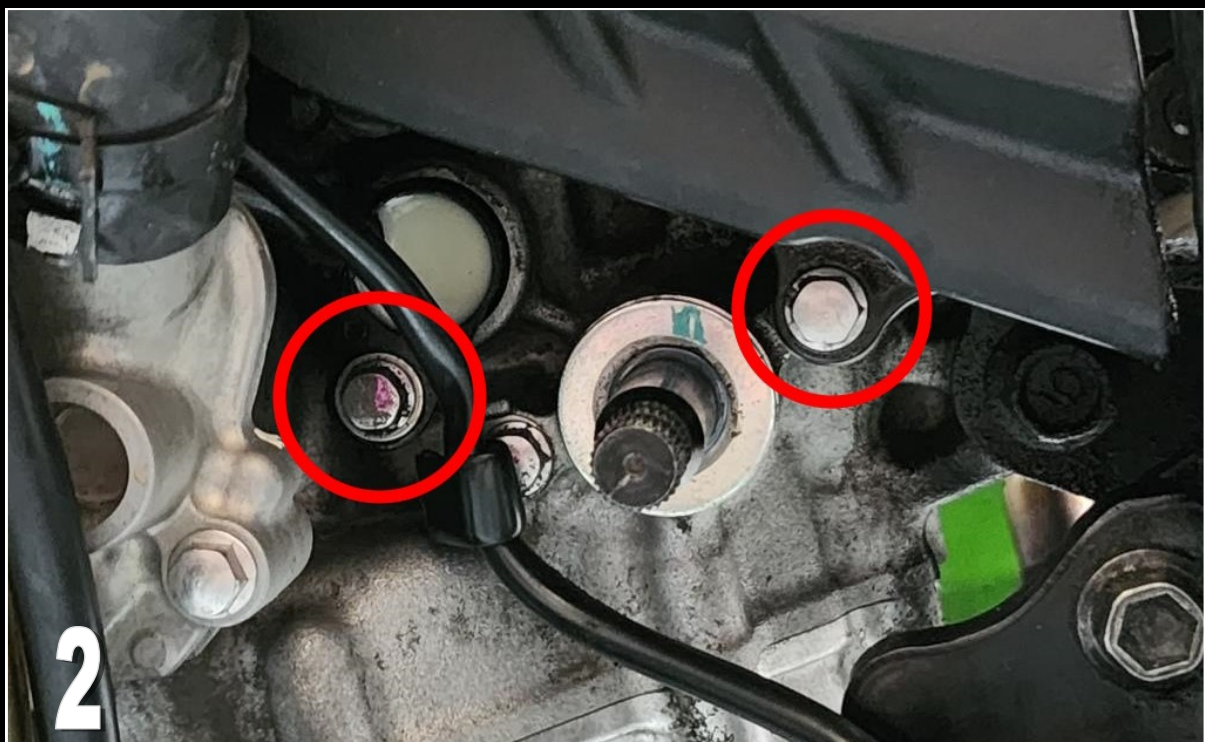

Let's get this done.

1) Remove the gear shift arm clamp.

2) Give the area a good clean up. And then remove the two bolts (ringed).

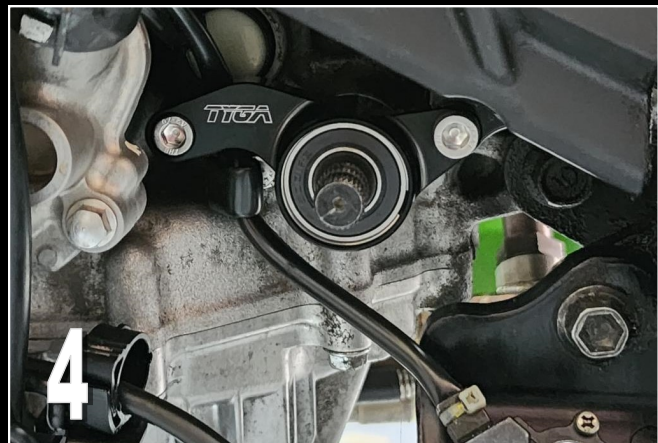

Notice that there is a washer on the bolt that secures the sensor. We will reuse this washer as a spacer.

3) Here's the order of fitting the support. Note the washer position.

4) Slide the support over the gear change shaft, and locate the two bolts. Tighten the bolts to 12Nm

5) Finally, fit the gear shift arm clamp and tighten.

6) Job Done Enjoy!
